DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-54 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Jackson US Patent Application Publication 2003/0069074. Jackson discloses in his abstract that his invention is to a computerized wagering game method and apparatus that features an operating operating system kernel, a system handler application that loads and executes gaming program shared objects and features nonvolatile storage that facilitates sharing of information between gaming program objects. The system handler of some embodiments further provides an API library of functions callable from the gaming program objects, and facilitates the use of callback functions on change of data stored in nonvolatile storage. The nonvolatile storage also provides a nonvolatile record of the state of the computerized wagering game, providing protection against loss of the game state due to power loss. The system handler application in various embodiments includes a plurality of device handlers, providing an interface to selected hardware and the ability to monitor hardware-related events. Paragraphs 56-60 disclose some of the software gaming element library which includes a game initiation

sequence (game flow), a bonus module, a video gaming module, an audio gaming module and various other modules and tools. Page 9 discloses changing one game for another using the same operating system. Pages 15 and 16 discloses where the different software modules may be accessed including the internet and a RAID data storage system. One of ordinary skill in the art could ascertain each claim element through a detailed reading of the publication.

Citation of Pertinent Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yoseloff et al '858, Moriya '687, Steelman et al '284 all relate to gaming hardware and software architecture.
